Applications

- Compounding
- Building and construction
- Hot melt adhesives
- Emulsions
- Wax modification

Attributes

- Imparts slip resistance, durability, and toughness to floor finishes
- Oxidized to provide functionality
- Produces stable water based emulsions
- Oxidized low density polyethylene

Product Description

EPOLENE® E-10 is an oxidized low molecular weight polyethylene used in emulsifiable applications. The low molecular weight and low softening point contribute to the production of stable, low color emulsions by both atmospheric (wax to water) and pressure emulsification methods. In water based emulsion floor finishes, it imparts good slip resistance, toughness and durability to the polish film.

Typical Physical Properties

<table>

</table>
| Penetration Hardness            | D-5         | 2 dm
| Mettler Drop Point              | D-6090      | 105 °C               |
| Brookfield Viscosity @ 125 °C   | D-4287      | 650-1,200 cP         |
| Yellowness Index                | D-313       | ≤ 4.0                |

* Unless noted otherwise, all tests are run at 23°C (73°F) and 50% relative humidity.
* Unless noted otherwise, the test method is ASTM.
* Units are in SI or US customary units.

Packaging

EPOLENE® E-10 is offered in multiple package types. See your Westlake sales or technical representative for packaging offerings and availability.

Storage

The useful life of this product can be affected by storage and handling conditions. This product should be stored in the original unopened container in an enclosed area and protected from moisture, extreme temperatures, and contamination. First-in first-out (FIFO) inventory management is recommended.

Regulatory Compliance

This product has some 21 CFR clearances. Please contact your Westlake Sales Representative for food contact statements.
